

TOUPIE DESK CLOCK

*When a spinning top tells the time it's possible for midday to be at 2pm.
Nine on the right, and 3 on the left, the top makes light of time, so why can't you?
Don't panic though, once a balance is found the numbers will go back into place!*

CONCEPT

The Toupie clock is a nod to the passing time. Its shape and function plays with time for an object that is both poetic and functional. The two wooden technical parts turned by a craftsman allows easy access to set the time and every battery change. Its concrete dial creates a perfect mineral /vegetable contrast.
